# Smake® Tree EPS – Easy Positioning System
Intuitive logo positioning by moving and resizing

Smake® Tree EPS – positioning is brilliantly simple!
A small but essential component in the production is the accurate, precise and fast logo positioning. With Smake® Tree EPS you have a product at hand which provides enormous savings of time and costs in your production. The patented Smake® Tree EPS is developed towards simplicity, speed, accuracy and ease of use, and after ›KISS‹-procedure *(keep it stupid and simple)* developed. The result is as ingenious as simple.

Disorientation and slowness remains a thing of the past
For many years -in a blind flight- employees slowly and inconvenient tried to find the right position of the textile on the printing plate. Through numerous corrections lots of working time is wasted and lots of expensive mistakes are being produced.
Smake® Tree EPS helps you positioning motifs on the textile by millimeter accuracy.

Smake® Offset Technique
With the beamer you can project motifs in original size and scale to the textile and make precise adjustments (moving and resizing) using a touchscreen interface. The new positional parameters are then automatically transferred which in turn can produce the favored result at a push of a button.
Smake® Tree EPS also enables untrained staff to print textiles in the shortest period of time.
